

INCH-POUND

MIL-M-38510/118A

05 November 2003

SUPERSEDING

MIL-M-38510/118

31 March 1980

MILITARY SPECIFICATION
MICROCIRCUITS, LINEAR, ADJUSTABLE, NEGATIVE, VOLTAGE REGULATORS, MONOLITHIC SILICON

This specification is approved for use by all Departments and Agencies of the Department of Defense.

Reactivated for new design as of 05 November 2003. May be used for either new or existing design acquisition.

The requirement for acquiring the product herein shall consist of this specification sheet and MIL-PRF-38535.

1. SCOPE

1.1 Scope. This specification covers the detail requirements for three and four terminal monolithic silicon, adjustable, negative, voltage regulators. Two product assurance classes and a choice of case outlines and lead finish are provided for each type and are reflected in the complete part number. For this product, the requirements of MIL-M-38510 have been superseded by MIL-PRF-38535, (see 6.3).

1.2 Part or Identifying Number (PIN). The PIN should be in accordance with MIL-PRF-38535, and as specified herein.

1.2.1 Device types. The device types should be as shown in the following:

<u>Device type</u>	<u>Circuit</u>	<u>Case outline letter</u>
01	4-terminal voltage regulator, -30 volts \leq $V_O \leq$ -5 volts at 0.5 A	X
02	4-terminal voltage regulator, -30 volts \leq $V_O \leq$ -5 volts at 1.0 A	Y
03	3-terminal voltage regulator, -37 volts \leq $V_O \leq$ -1.25 volts at 0.5 A	X
04	3-terminal voltage regulator, -37 volts \leq $V_O \leq$ -1.25 volts at 1.5 A	Y

1.2.2 Device class. The device class should be the product assurance level as defined in MIL-PRF-38535.

1.2.3 Case outlines. The case outlines should be designated in MIL-STD-1835 and as follows:

<u>Outline letter</u>	<u>Descriptive designator</u>	<u>Terminals</u>	<u>Device type</u>	<u>Package style</u>
X	See figure 1	4	01	Can
Y	See figure 2	4	02	Flange mount
X	See figure 3	3	03	Can
Y	See figure 4	2	04	Flange mount

Comments, suggestions, or questions on this document should be addressed to: Commander, Defense Supply Center Columbus, ATTN: DSCC-VAS, 3990 East Broad St., Columbus, OH 43216-5000, or emailed to linear@dsc.dla.mil. Since contact information can change, you may want to verify the currency of this address information using the ASSIST Online database at www.dodssp.daps.mil.

1.3 Absolute maximum ratings.

Input voltage (device types 01 and 02)	-40 V
Input-output differential voltage (device types 03 and 04)	-40 V
Lead temperature (soldering, 60 seconds)	+300°C
Junction temperature (T_J)	+150°C <u>1/</u>
Storage temperature range	-65°C to +150°C

1.4 Recommended operating conditions.

Input voltage range:

Device types 01 and 02	-8 V dc to -38 V dc
Device types 03 and 04	-4.25 V dc to -41.25 V dc
Ambient operating temperature range (T_A)	-55°C to +125°C

1.5 Power and thermal characteristics.

$T_A = T_S$	Case	Max θ_{JA}	Maximum P_D with heat sink	Max θ_{JC}	Maximum P_D with heat sink	Max θ_{C-S} <u>2/</u>
125°C <u>3/</u>	X	140°C/W	0.18 W	40°C/W	0.5 W	10°C/W
	Y	35°C/W	0.71 W	4°C/W	5.6 W	0.5°C/W
25°C	X	140°C/W	0.89 W	40°C/W	2.50 W	10°C/W
	Y	35°C/W	3.60 W	4°C/W	28.00 W	0.5°C/W
-55°C	X	140°C/W	1.50 W	40°C/W	4.00 W	10°C/W
	Y	35°C/W	5.80 W	4°C/W	45.00 W	0.5°C/W

1/ The device is protected by a thermal shutdown circuit which is designed to turn off the output transistor whenever the device junction temperature is in excess of 150°C.2/ This value represents the maximum allowable thermal impedance of a heat sink to remain within the thermal ratings.3/ Based on $T_J = 150^\circ\text{C}$ and specified values of θ_{JA} and θ_{JC} .

2. APPLICABLE DOCUMENTS

2.1 General. The documents listed in this section are specified in sections 3, 4, or 5 of this specification. This section does not include documents cited in other sections of this specification or recommended for additional information or as examples. While every effort has been made to ensure the completeness of this list, document users are cautioned that they must meet all specified requirements of documents cited in sections 3, 4, or 5 of this specification, whether or not they are listed.

2.2 Government documents.

2.2.1 Specifications, standards, and handbooks. The following specifications and standards form a part of this specification to the extent specified herein. Unless otherwise specified, the issues of these documents are those cited in the solicitation or contract.

DEPARTMENT OF DEFENSE SPECIFICATIONS

MIL-PRF-38535 - Integrated Circuits (Microcircuits) Manufacturing, General Specification for.

DEPARTMENT OF DEFENSE STANDARDS

MIL-STD-883 - Test Method Standard for Microelectronics.

MIL-STD-1835 - Interface Standard Electronic Component Case Outlines.

(Copies of these documents are available online at <http://assist.daps.dla.mil:quicksearch/> or www.dodssp.daps.mil or from the Standardization Document Order Desk, 700 Robbins Avenue, Building 4D, Philadelphia, PA 19111-5094.)

2.3 Order of precedence. In the event of a conflict between the text of this specification and the references cited herein, the text of this document shall takes precedence. Nothing in this document, however, supersedes applicable laws and regulations unless a specific exemption has been obtained.

3. REQUIREMENTS

3.1 Qualification. Microcircuits furnished under this specification shall be products that are manufactured by a manufacturer authorized by the qualifying activity for listing on the applicable qualified manufacturers list before contract award (see 4.3 and 6.4).

3.2 Item requirements. The individual item requirements shall be in accordance with MIL-PRF-38535 and as specified herein or as modified in the device manufacturer's Quality Management (QM) plan. The modification in the QM plan shall not affect the form, fit, or function as described herein.

3.3 Design, construction, and physical dimensions. The design, construction, and physical dimensions shall be as specified in MIL-PRF-38535 and herein.

3.3.1 Block diagram and terminal connections. The block diagrams and terminal connections shall be as specified on figures 5 through 8.

3.3.2 Schematic circuits. The schematic circuits shall be maintained by the manufacturer and made available to the qualifying activity and the preparing activity (DSCC-VA) upon request.

3.3.3 Case outlines. The case outlines shall be as specified in 1.2.3 and on figures 1, 2, 3, and 4.

3.4 Lead material and finish. Lead material and finish shall be in accordance with MIL-PRF-38535 (see 6.6).

3.4.1 Lead material. The lead material shall be in accordance with MIL-PRF-38535, or as follows:

Type X

Nickel	50-53 percent
Manganese	0.60 percent, maximum
Silicon	0.30 percent, maximum
Carbon	0.10 percent, maximum
Chromium	0.25 percent, maximum
Cobalt	0.50 percent, maximum
Phosphorous	0.025 percent, maximum
Sulfur	0.025 percent, maximum
Aluminum	0.10 percent maximum
Iron	Remainder

Type Y

Copper core	24.75 percent, maximum
Clad with Alloy 52	75.25 percent maximum

3.5 Electrical performance characteristics. Unless otherwise specified, the electrical performance characteristics are as specified in table I and apply over the full operating ambient temperature range of -55°C to $+125^{\circ}\text{C}$.

3.5.1 Stability. If the device is located an appreciable distance from the power supply filter, a solid tantalum bypass capacitor should be connected as close to the device V_{CC} input as possible to suppress oscillation. A solid tantalum bypass capacitor is recommended on the device output. Output current oscillations may occur in the current limit operating mode. Since load currents of less than 5 milliamperes may result in a loss of voltage regulation, regulators should be preloaded with 5 milliamperes of load current in lightly loaded applications.

3.5.2 Test limit. The test limits specified in tables I and III apply only for the stated test conditions (example, 2 percent duty cycle), which essentially keep the junction temperature constant. In most applications the junction temperature will greatly exceed the 25°C ambient or sink temperature; thus devices may not perform within the 25°C specified limits.

3.6 Electrical test requirements. Electrical test requirements for each device class shall be the subgroups specified in table II. The electrical tests for each subgroup are described in table III.

3.7 Marking. Marking shall be in accordance with MIL-PRF-38535. At the option of the manufacturer, marking of the country of origin may be omitted from the body of the microcircuit, but shall be retained on the initial container.

3.8 Microcircuit group assignment. The devices covered by this specification shall be in microcircuit group number 52 (see MIL-PRF-38535, appendix A).

TABLE I. Electrical performance characteristics.

Test	Symbol	Conditions 1/ 2/ $-55^{\circ}\text{C} \leq T_A \leq +125^{\circ}\text{C}$ see figure 9 and 3.5 unless otherwise specified		Device type	Limits		Unit
		Input voltage	Load current		Min	Max	
Output voltage	V_{OUT}	$V_{\text{IN}} = -8 \text{ V}$	$I_L = 5 \text{ mA}, 500 \text{ mA}$	01	-5.25	-4.75	V
		$V_{\text{IN}} = -30 \text{ V}$	$I_L = 5 \text{ mA}, 50 \text{ mA}$		-5.25	-4.75	
		$V_{\text{IN}} = -38 \text{ V}$	$I_L = 500 \text{ mA}$		-31.5	-28.5	
		$V_{\text{IN}} = -10 \text{ V},$ $T_A = 150^{\circ}\text{C}$	$I_L = 5 \text{ mA}$		-5.25	-4.75	
Line regulation	V_{RLINE}	$-30 \text{ V} \leq V_{\text{IN}} \leq -8 \text{ V}$	$I_L = 50 \text{ mA}$	01	-150	150	mV
		$-25 \text{ V} \leq V_{\text{IN}} \leq -8 \text{ V}$	$I_L = 350 \text{ mA}$		-50	50	
Load regulation	V_{RLOAD}	$V_{\text{IN}} = -10 \text{ V}$	$5 \text{ mA} \leq I_L \leq 500 \text{ mA}$	01	-100	100	mV
		$V_{\text{IN}} = -30 \text{ V}$	$5 \text{ mA} \leq I_L \leq 50 \text{ mA}$		-150	150	
Thermal regulation	V_{RTH}	$V_{\text{IN}} = -15 \text{ V},$ $T_A = 25^{\circ}\text{C}$	$I_L = 500 \text{ mA}$	01	-50	50	mV
Standby current drain	I_{SCD}	$V_{\text{IN}} = -10 \text{ V}$	$I_L = 5 \text{ mA}$	01	0.1	3.0	mA
		$V_{\text{IN}} = -30 \text{ V}$	$I_L = 5 \text{ mA}$		0.1	4.0	
Standby current drain change versus line voltage	ΔI_{SCD} (LINE)	$-30 \text{ V} \leq V_{\text{IN}} \leq -8 \text{ V}$	$I_L = 5 \text{ mA}$	01	-1.0	1.0	mA
Standby current drain change versus load current	ΔI_{SCD} (LOAD)	$V_{\text{IN}} = -10 \text{ V}$	$5 \text{ mA} \leq I_L \leq 500 \text{ mA}$	01	-0.5	0.5	mA
Control pin current	I_{CTL}	$V_{\text{IN}} = -10 \text{ V},$ $T_A = 25^{\circ}\text{C}$	$I_L = 350 \text{ mA}$	01	0.001	2.00	μA
		$V_{\text{IN}} = -10 \text{ V},$ $-55^{\circ}\text{C} \leq T_A \leq 125^{\circ}\text{C}$	$I_L = 350 \text{ mA}$		0.001	3.00	

See footnotes at end of table.

		Input voltage	Load current		Min	Max	
Output noise voltage	V _{NO}	V _{IN} = -6.25 V, <u>4/</u> see figure 11	I _L = 50 mA, T _A = 25°C	03		120	µV _{rms}
Line transient response	ΔV _{OUT} / ΔV _{IN}	V _{IN} = -6.25 V, <u>5/</u> ΔV _{IN} = -1.0 V, see figure 12	I _L = 50 mA, T _A = 25°C	03		80	mV/V
Load transient response	ΔV _{OUT} / ΔI _L	V _{IN} = -6.25 V, <u>5/</u> see figure 13	I _L = 50 mA, ΔI _L = 200 mA T _A = 25°C	03		0.30	mV/mA
Output voltage	V _{OUT}	V _{IN} = -4.25 V, T _A = 25°C	I _L = 5 mA, 1.5 A	04	-1.275	-1.225	V
		V _{IN} = -4.25 V, -55°C ≤ T _A ≤ 125°C	I _L = 5 mA, 1.5 A		-1.30	-1.20	
		V _{IN} = -41.25 V, T _A = 25°C	I _L = 5 mA, 200 mA		-1.275	-1.225	
		V _{IN} = -41.25 V, -55°C ≤ T _A ≤ 125°C	I _L = 5 mA, 200 mA		-1.30	-1.20	
		V _{IN} = -6.25 V, T _A = 150°C	I _L = 5 mA		-1.30	-1.20	
Line regulation	V _{RLINE}	-41.25 V ≤ V _{IN} ≤ -4.25 V, T _A = 25°C	I _L = 5 mA	04	-9	9	mV
		-41.25 V ≤ V _{IN} ≤ -4.25 V, -55°C ≤ T _A ≤ 125°C	I _L = 5 mA		-23	23	

See footnotes at end of table.

TABLE I. Electrical performance characteristics – Continued.

Test	Symbol	Conditions 1/ 2/ $-55^{\circ}\text{C} \leq T_A \leq +125^{\circ}\text{C}$ see figure 9 and 3.5 unless otherwise specified		Device type	Limits		Unit
		Input voltage	Load current		Min	Max	
Load regulation	V_{RLOAD}	$V_{IN} = -6.25 \text{ V}$, $T_A = 25^{\circ}\text{C}$	$5 \text{ mA} \leq I_L \leq 1.5 \text{ A}$	04	-6	6	mV
		$V_{IN} = -6.25 \text{ V}$, $-55^{\circ}\text{C} \leq T_A \leq 125^{\circ}\text{C}$	$5 \text{ mA} \leq I_L \leq 1.5 \text{ A}$		-12	12	
		$V_{IN} = -41.25 \text{ V}$, $T_A = 25^{\circ}\text{C}$	$5 \text{ mA} \leq I_L \leq 150 \text{ mA}$		-6	6	
		$V_{IN} = -41.25 \text{ V}$, $-55^{\circ}\text{C} \leq T_A \leq 125^{\circ}\text{C}$	$5 \text{ mA} \leq I_L \leq 150 \text{ mA}$		-12	12	
Thermal regulation	V_{RTH}	$V_{IN} = -14.6 \text{ V}$, $T_A = 25^{\circ}\text{C}$	$I_L = 1.5 \text{ A}$	04	-5	5	mV
Adjust pin current	I_{ADJ}	$V_{IN} = -4.25 \text{ V}$	$I_L = 5 \text{ mA}$	04	25	100	μA
		$V_{IN} = -41.25 \text{ V}$	$I_L = 5 \text{ mA}$		25	100	
Adjust pin current change versus line voltage	ΔI_{ADJ} (LINE)	$-41.25 \text{ V} \leq V_{IN} \leq -4.25 \text{ V}$	$I_L = 5 \text{ mA}$	04	-5	5	μA
Adjust pin current change versus load current	ΔI_{ADJ} (LOAD)	$V_{IN} = -6.25 \text{ V}$	$5 \text{ mA} \leq I_L \leq 1.5 \text{ A}$	04	-5	5	μA
Minimum load current	I_Q	$-14.25 \text{ V} \leq V_{IN} \leq -4.25 \text{ V}$, forced $V_{OUT} = -1.4 \text{ V}$		04	0.20	3.00	mA
		$V_{IN} = -41.25 \text{ V}$ forced $V_{OUT} = -1.4 \text{ V}$			1.00	5.00	
Output short circuit current	I_{OS1}	$V_{IN} = -4.25 \text{ V}$		04	1.5	3.5	A
	I_{OS2}	$V_{IN} = -40 \text{ V}$			0.2	1.0	

See footnotes at end of table.

TABLE I. Electrical performance characteristics – Continued.

Test	Symbol	Conditions <u>1/ 2/</u> $-55^{\circ}\text{C} \leq T_A \leq +125^{\circ}\text{C}$ see figure 9 and 3.5 unless otherwise specified		Device type	Limits		Unit
		Input voltage	Load current		Min	Max	
Output voltage recovery after output short circuit current	V_{OUT} (RECOV)	$V_{\text{IN}} = -4.25 \text{ V}, \underline{3/}$ after I_{OS1}	$R_L = 0.833 \Omega,$ $C_L = 10 \mu\text{F}$	04	-1.30	-1.20	V
		$V_{\text{IN}} = -40 \text{ V}, \underline{3/}$ after I_{OS2}	$R_L = 250 \Omega$		-1.30	-1.20	
Voltage start-up	V_{START}	$V_{\text{IN}} = -4.25 \text{ V}$	$R_L = 0.833 \Omega,$ $C_L = 10 \mu\text{F}$	04	-1.30	-1.20	V
Ripple rejection	$\Delta V_{\text{IN}} / \Delta V_{\text{OUT}}$	$V_{\text{IN}} = -6.25 \text{ V}, \underline{6/}$ $e_i = 1 \text{ Vrms},$ at $f_o = 2400 \text{ Hz}$	$I_L = 500 \text{ mA},$ $T_A = 25^{\circ}\text{C},$ see figure 10	04	50		dB
Output noise voltage	V_{NO}	$V_{\text{IN}} = -6.25 \text{ V}, \underline{4/}$ see figure 11	$I_L = 100 \text{ mA},$ $T_A = 25^{\circ}\text{C}$	04		120	μVrms
Line transient response	$\Delta V_{\text{OUT}} / \Delta V_{\text{IN}}$	$V_{\text{IN}} = -6.25 \text{ V}, \underline{5/}$ $\Delta V_{\text{IN}} = -1.0 \text{ V},$ see figure 12	$I_L = 100 \text{ mA},$ $T_A = 25^{\circ}\text{C}$	04		80	mV/V
Load transient response	$\Delta V_{\text{OUT}} / \Delta I_L$	$V_{\text{IN}} = -6.25 \text{ V}, \underline{5/}$ see figure 13	$I_L = 100 \text{ mA},$ $\Delta I_L = 400 \text{ mA}$ $T_A = 25^{\circ}\text{C}$	04		0.15	mV/mA

- 1/ All tests performed at $T_A = 125^{\circ}\text{C}$ may at the manufacturer's option, be performed at $T_A = 150^{\circ}\text{C}$.
Specifications for $T_A = 125^{\circ}\text{C}$ shall then apply at $T_A = 150^{\circ}\text{C}$.
- 2/ Static tests with load currents greater than 5 mA are performed under pulsed conditions defined on figure 12.
- 3/ Output voltage recovery test shall be performed, with the designated load conditions, immediately after removal of each I_{OS} test forced output voltage condition.
- 4/ The meter for e_i and e_o shall have a minimum bandwidth from 10 Hz to 10 kHz and shall measure true rms voltages.
- 5/ The oscilloscope shall have a bandwidth between 5 and 15 MHz.
- 6/ The meter for e_i and e_o shall have a minimum bandwidth from 300 Hz to 10 kHz and shall measure true rms voltage.

4. VERIFICATION.

4.1 Sampling and inspection. Sampling and inspection procedures should be in accordance with MIL-PRF-38535 or as modified in the device manufacturer's Quality Management (QM) plan. The modification in the QM plan shall not effect the form, fit, or function as described herein.

4.2 Screening. Screening shall be in accordance with MIL-PRF-38535, and shall be conducted on all devices prior to qualification and quality conformance inspection. The following additional criteria shall apply:

- a. For class S and B devices, an additional burn-in screen shall be performed to test the operation of the thermal shutdown circuit. This screen shall be performed after serialization (3.1.8 of method 5004 of MIL-STD-883) and before interim electrical parameters (pre burn-in, 3.1.9 of method 5004 of MIL-STD-883). The requirements of 3.2.3 of method 1015 of MIL-STD-883 shall apply to this screen except the devices need not be tested in an oven.
- b. The burn-in test duration, test condition, and test temperature, or approved alternatives shall be as specified in the device manufacturer's QM plan in accordance with MIL-PRF-38535. The burn-in test circuit shall be maintained under document control by the device manufacturer's Technology Review Board (TRB) in accordance with MIL-PRF-38535 and shall be made available to the acquiring or preparing activity upon request. The test circuit shall specify the inputs, outputs, biases, and power dissipation, as applicable, in accordance with the intent specified in test method 1015 of MIL-STD-883.
- c. Interim and final electrical test parameters shall be as specified in table II, except interim electrical parameters test prior to burn-in is optional at the discretion of the manufacturer.
- d. Additional screening for space level product shall be as specified in MIL-PRF-38535.
- e. Constant acceleration (method 2001 of MIL-STD-883); test condition B shall be used for case Y.

4.3 Qualification inspection. Qualification inspection shall be in accordance with MIL-PRF-38535.

4.4 Technology Conformance inspection (TCI). Technology conformance inspection shall be in accordance with MIL-PRF-38535 and herein for groups A, B, C, and D inspections (see 4.4.1 through 4.4.4).

4.4.1 Group A inspection. Group A inspection shall be in accordance with table III of MIL-PRF-38535 and as follows:

- a. Tests shall be as specified in table II herein.
- b. Subgroups 5, 6, 8, 9, 10, and 11 shall be omitted.

4.4.2 Group B inspection. Group B inspection shall be in accordance with table II of MIL-PRF-38535 and as follows:

- a. End point electrical parameters shall be as specified in table II herein.
- b. When using the method 5005 option, constant acceleration for class S (method 2001 of MIL-STD-883); test condition B shall be used for case Y.

4.4.3 Group C inspection. Group C inspection shall be in accordance with table IV of MIL-PRF-38535 and as follows:

- a. End point electrical parameters shall be as specified in table IV herein. Delta limits shall apply to subgroup 1 of group C inspection for class B devices.
- b. The steady-state life test duration, test condition, and test temperature, or approved alternatives shall be as specified in the device manufacturer's QM plan in accordance with MIL-PRF-38535. The burn-in test circuit shall be maintained under document control by the device manufacturer's Technology Review Board (TRB) in accordance with MIL-PRF-38535 and shall be made available to the acquiring or preparing activity upon request. The test circuit shall specify the inputs, outputs, biases, and power dissipation, as applicable, in accordance with the intent specified in test method 1005 of MIL-STD-883.

TABLE II. Electrical test requirements.

MIL-PRF-38535 test requirements	Subgroups (see table III)	
	Class S devices	Class B devices
Interim electrical parameters	1	1
Final electrical test parameters <u>1/</u>	1,2,3,4	1,2,3,4
Group A test requirements	1,2,3,4,7	1,2,3,4,7
Group B electrical test parameters when using the method 5005 QCI option	1,2,3, and table IV delta limits	N/A
Group C electrical parameters	1,2,3, and table IV delta limits	1 and table IV delta limits
Additional electrical subgroups for group C periodic inspections	Not applicable	None
Group D end point electrical parameters	1,2,3	1

1/ PDA applies to subgroup 1.

4.4.4 Group D inspection. Group D inspection shall be in accordance with table V of MIL-PRF-38535 and as follows:

- a. End point electrical parameters shall be as specified in table II herein.
- b. Constant acceleration (method 2001 of MIL-STD-883); test condition B shall be used for case Y.

4.5 Methods of inspection. Methods of inspection shall be as specified and as follows.

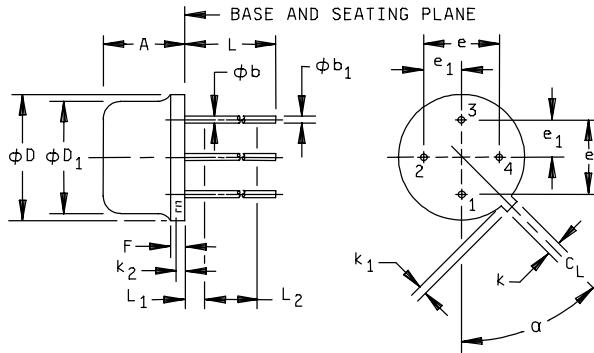

4.5.1 Voltage and current. All voltage values given are referenced to the designated return sense line. Currents given are conventional current and positive when flowing into the referenced terminal.

4.5.2 Life test and burn-in cool down procedure. When devices are measured at +25°C following application of the operating life or burn-in condition, they shall be cooled to room temperature prior to removal of the bias.

4.5.3 Inspection of packaging. The sampling and inspection of the preservation – packaging, packing, and container marking shall be in accordance with the requirements of MIL-PRF-38535.

5. PACKAGING

5.1 Packaging requirements. For acquisition purposes, the packaging requirements shall be as specified in the contract or order (see 6.2). When actual packaging of materiel is to be performed by DoD or in-house contractor personnel, these personnel need to contact the responsible packaging activity to ascertain packaging requirements. Packaging requirements are maintained by the Inventory Control Point's packaging activity within the Military Service or Defense Agency, or within the military's service system command. Packaging data retrieval is available from the managing Military Department's or Defense Agency's automated packaging files, CD-ROM products, or by contacting the responsible packaging activity.

LINE REGULATION WAVEFORMS

LOAD REGULATION WAVEFORMS

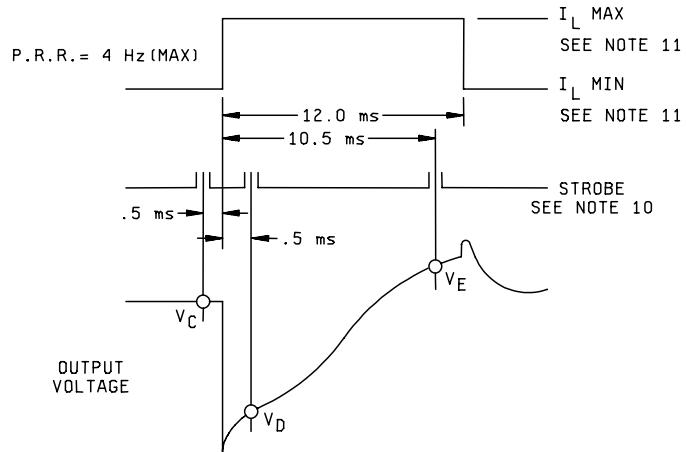

FIGURE 9. Test circuit for static tests – Continued.

WAVEFORMS FOR VOLTAGE START-UP, OUTPUT SHORT CIRCUIT CURRENT,
AND OUTPUT VOLTAGE RECOVERY

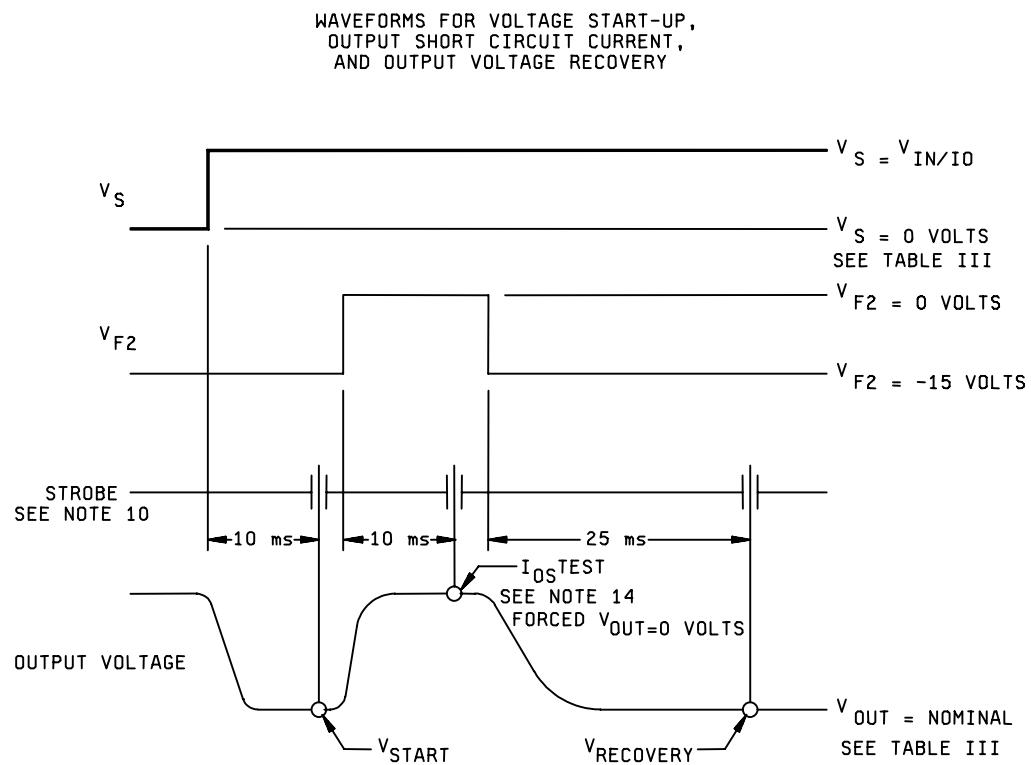

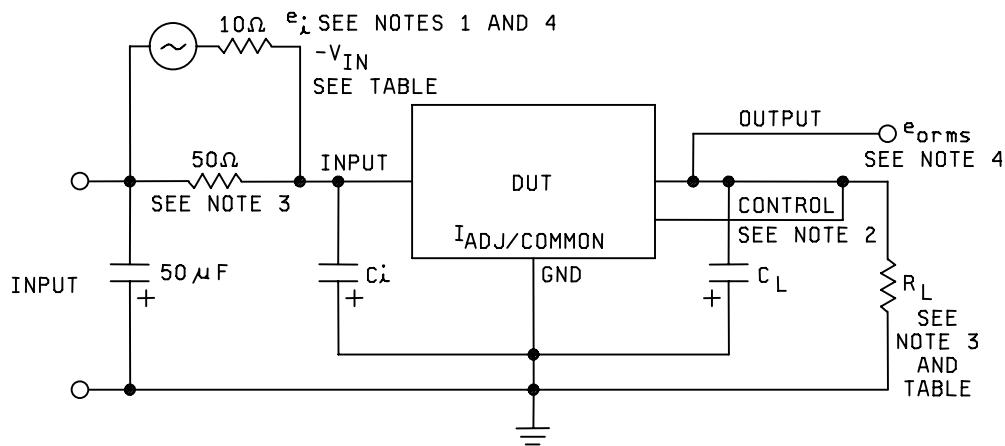

FIGURE 9. Test circuit for static tests – Continued.

NOTES:

1. Heavy current paths ($I \geq 1.0$ A) are indicated by bold lines.
2. Kelvins connections must be used for all output current and voltage measurements.
For device types 03 and 04, output voltage measurements shall be made 1/8 inch below the case.
3. The output offset voltage shall be adjusted to zero with the device under test (DUT) removed.
The operational amplifier stabilization networks may vary with test adapter construction.
Alternate drive circuits for the 2N6296 may be used to develop the proper load current and input voltage pulses. These circuits shall require the approval of the qualifying activity.
4. Relay switch positions are defined in table III.
5. Load currents of 5 mA may be established via the load resistors R_1 and R_2 . All other load currents shall be established via the pulse load circuits. Resistors R_1 and R_2 shall have a tolerance $\leq 0.1\%$ for device types 01 and 02.
6. The pulse generator for the pulse load circuit shall have the following characteristics:
 - a. Pulse amplitude = $-10 (|I_L| - V_O / (R_1 + R_2))$ volts.
 - b. Pulse width = 1.0 ms (unless otherwise stated).
 - c. Duty cycle = 2% (maximum).
7. Load currents shall be determined by the voltage measured across the 1Ω resistor.
Measurements shall be made 0.5 ms after the start of the pulse.
8. $|V_{IN}|$ (LOW) and $|V_{IN}|$ (HIGH) per table III herein.
9. $V_{RLINE} = V_B - V_A$.
10. The output voltage is sampled at specified intervals. Strobe pulse width is 100 μs maximum.
11. I_L (minimum) and I_L (maximum) per table III herein.
12. $V_{RLOAD} = V_D - V_C$.
13. $V_{RTH} = V_D - V_E$.
14. $I_{OS} = (I_L)$ amps.

FIGURE 9. Test circuit for static tests – Continued.

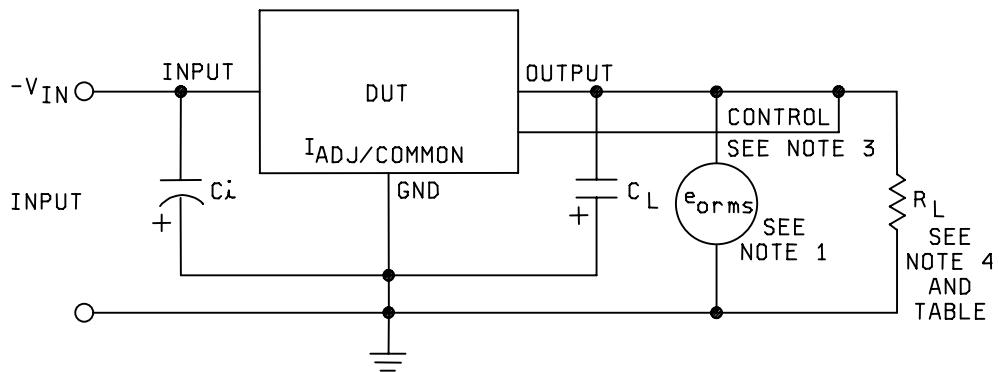

Device table				
Device type	01	02	03	04
V_{IN}	-10 V	-10 V	-6.25 V	-6.25 V
R_L	40.2Ω	14.3Ω	10Ω	2.5Ω
C_i, C_L	$2.0\mu F$	$2.0\mu F$	$1.0\mu F$	$1.0\mu F$

NOTES:

- $e_i = 1 \text{ Vrms}$ at $f = 2400 \text{ Hz}$ (measured at the input terminals of the DUT).
Ripple rejection = $20 \log (e_{o\text{rms}} / e_{i\text{rms}})$.
- The control pin connection is required for device types 01 and 02 only.
- The input 50Ω resistor and R_L shall be type RER 70 or equivalent.
- The meter for e_i and e_o shall have a minimum bandwidth from 10 Hz to 10 kHz and shall measure true rms voltages.

FIGURE 10. Ripple rejection test circuit.

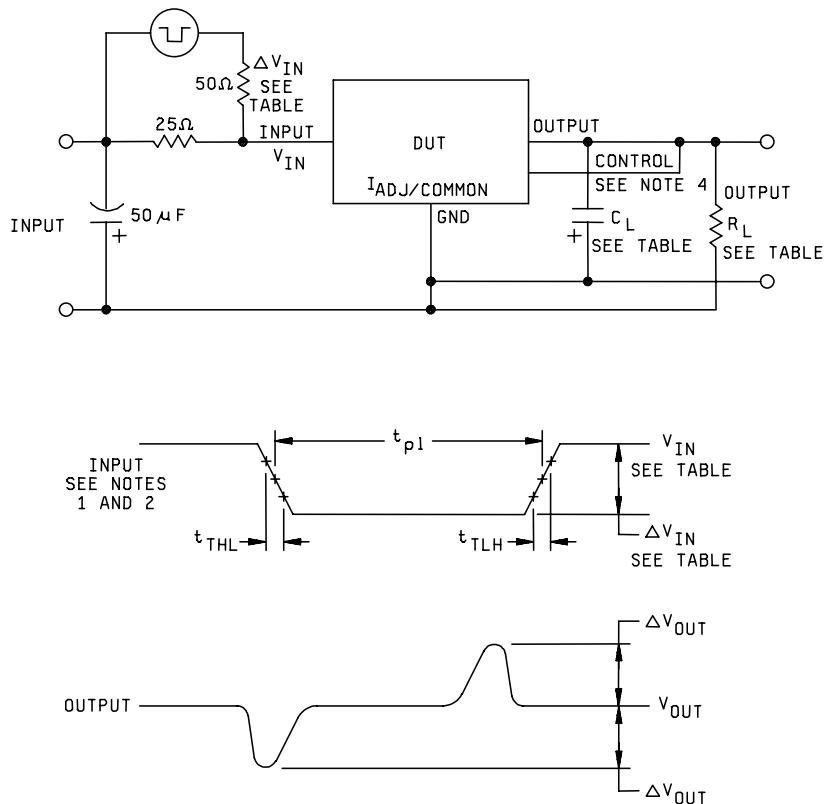

Device table				
Device type	01	02	03	04
V_{IN}	10 V	10 V	6.25 V	6.25 V
R_L	100 Ω	50 Ω	25 Ω	12.5 Ω
C_i, C_L	2.0 μF	2.0 μF	1.0 μF	1.0 μF

NOTES:

1. The meter for measuring e_{rms} and shall have a minimum bandwidth from 10 Hz to 10 kHz and shall measure true rms voltages.
2. $N_O = e_{rms}$
3. The control pin connection is required for device types 01 and 02 only.
4. R_L shall be type RER 70 or equivalent.

FIGURE 11. Noise test circuit.

Device table					
Device type	01	02	03	04	Notes
V _{IN}	-10 V	-10 V	-6.25 V	-6.25 V	1
ΔV _{IN}	-3.0 V	-3.0 V	-1.0 V	-1.0 V	1
R _L	1.25 kΩ	1.25 kΩ	25 Ω	12 Ω	
t _{THL} = t _{TLH}	5.0 μs	5.0 μs	5.0 μs	5.0 μs	1
C _i , C _L	2.0 μF	2.0 μF	1.0 μF	1.0 μF	

NOTES:

1. Measured at device input.
2. Pulse width t_{p1} = 25 μs; duty cycle = 3% (maximum).
3. Oscilloscope bandwidth = 5 MHz to 15 MHz.
4. The control pin connection is required for device types 01 and 02 only..

FIGURE 12. Line transient test circuit.

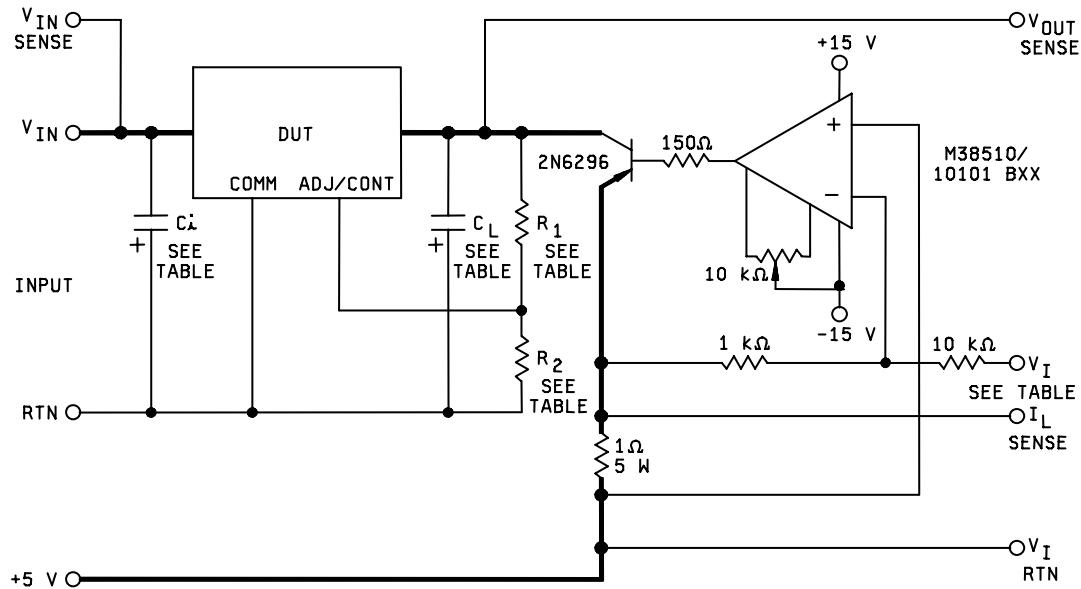

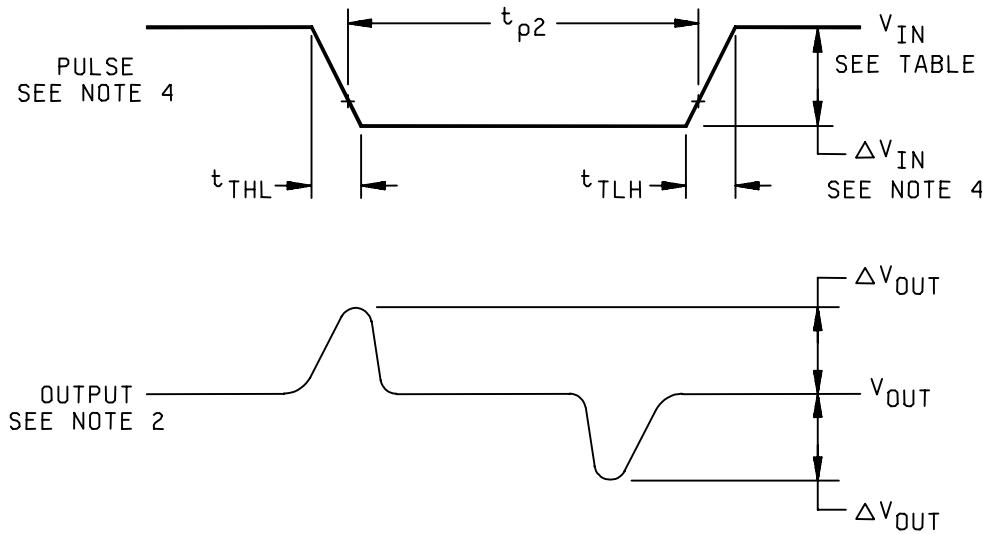

FIGURE 13. Load transient response test circuit.

Device table				
Device type	01	02	03	04
R ₁	0	0	249 Ω	249 Ω
R ₂	5.0 kΩ	5.0 kΩ	0	0
I _L	50 mA	100 mA	50 mA	100 mA
ΔI _L	200 mA	400 mA	200 mA	400 mA
V _I	0.49 V	0.99 V	0.45 V	0.95 V
ΔV _I	2.0 V	4.0 V	2.0 V	4.0 V
C _i , C _L	2.0 μF	2.0 μF	1.0 μF	1.0 μF

NOTES:

1. Heavy current paths ($I \geq 1.0$ A) are indicated by bold lines.
2. Kelvin connections must be used for all output current and voltage measurements.
3. The operational amplifier stabilization networks may vary with test adapter construction. Alternate drive circuits for the 2N6296 may be used to develop the proper load current and input voltage pulses. These circuits shall require the approval of the qualifying activity.
4. The pulse generator for the pulse load circuit shall have the following characteristics. (See device table.)
 - a. Voltage level (V_I) = $10 (|I_L| - (V_{OUT} / (R_1 + R_2)))$ volts.
 - b. Pulse width (t_{p2}) = 25 μ s.
 - c. Duty cycle = 3% (maximum).
 - d. $t_{THL} = t_{TLH} = 1.0$ μ s for device types 01 and 02.
 - e. $t_{THL} = t_{TLH} = 5.0$ μ s for device types 03 and 04.
 - f. Difference voltage level (ΔV_I) = $10 (I_L)$ volts.
5. a. $\Delta V_{OUT} = 500$ mV maximum for device type 01.
b. $\Delta V_{OUT} = 1,000$ mV maximum for device type 02.
c. $\Delta V_{OUT} = 60$ mV maximum for device types 03 and 04.
(These values guarantee the specified limits for load transient response.)
6. The oscilloscope shall have a bandwidth between 5 and 15 MHz.

FIGURE 13. Load transient response test circuit – Continued.

TABLE IV. Group C end point electrical parameters. ($T_A = +25^\circ\text{C}$)

Device type	Characteristic	Symbol	Delta limits 1/	Limits		Units
				Min	Max	
01, 02	Output voltage	V_{OUT}	$\pm 50 \text{ mV}$	-5.25	-4.75	V
	Standby current drain	I_{SCD}	$\pm 20 \%$	0.5	4.0	mA
03, 04	Output voltage	V_{OUT}	$\pm 10 \text{ mV}$	-1.275	-1.225	V
	Adjust pin current	I_{ADJ}	$\pm 10 \mu\text{A}$	25	100	μA
	Line regulation	V_{RLINE}	$\pm 4 \text{ mV}$	-9	9	mV

1/ Delta limits apply to the measured value (see delta limit definition in MIL-PRF-38535).

6. NOTES

6.1 Intended use. Microcircuits conforming to this specification are intended for original equipment design applications and logistic support of existing equipment.

6.2 Acquisition requirements. Acquisition documents should specify the following:

- a. Title, number, and date of the specification.
- b. Pin and compliance identifier, if applicable (see 1.2).
- c. Requirements for delivery of one copy of the quality conformance inspection data pertinent to the device inspection lot to be supplied with each shipment by the device manufacturer, if applicable.
- d. Requirements for certificate of compliance, if applicable.
- e. Requirements for notification of change of product or process to contracting activity in addition to notification to the qualifying activity, if applicable.
- f. Requirements for failure analysis (including required test condition of method 5003 of MIL-STD-883), corrective action, and reporting of results, if applicable.
- g. Requirements for product assurance options.
- h. Requirements for special carriers, lead lengths, or lead forming, if applicable. These requirements should not affect the part number. Unless otherwise specified, these requirements will not apply to direct purchase by or direct shipment to the Government.
- i. Requirements for "JAN" marking.
- j. Packaging requirements (see 5.1).

6.3 Superseding information. The requirements of MIL-M-38510 have been superseded to take advantage of the available Qualified Manufacturer Listing (QML) system provided by MIL-PRF-38535. Previous references to MIL-M-38510 in this document have been replaced by appropriate references to MIL-PRF-38535. All technical requirements now consist of this specification and MIL-PRF-38535. The MIL-M-38510 specification sheet number and PIN have been retained to avoid adversely impacting existing government logistics systems and contractor's parts lists.

6.4 Qualification. With respect to products requiring qualification, awards will be made only for products which are, at the time of award of contract, qualified for inclusion in Qualified Manufacturers List QML-38535 whether or not such products have actually been so listed by that date. The attention of the contractors is called to these requirements, and manufacturers are urged to arrange to have the products that they propose to offer to the Federal Government tested for qualification in order that they may be eligible to be awarded contracts or purchase orders for the products covered by this specification. Information pertaining to qualification of products may be obtained from DSCC-VQ, 3990 E. Broad Street, Columbus, Ohio 43123-1199.

6.5 Abbreviations, symbols, and definitions. The abbreviations, symbols, and definitions used herein are defined in MIL-PRF-38535, MIL-HDBK-1331, and as follows:

6.5.1 Line regulation. The change in output voltage for a specified change in input voltage (V_{RLINE}).

6.5.2 Load regulation. The change in output voltage for a specified change in load current (V_{RLOAD}).

6.5.3 Ripple rejection. The ratio of the peak to peak input ripple voltage to the peak to peak output ripple voltage ($\Delta V_{OUT} / \Delta V_{IN}$).

6.5.4 Output noise voltage. The rms output noise voltage with constant load and no input ripple (V_{NO}).

6.5.5 Standby current drain. The supply current drawn by the regulator with no output load or with a 1 kilohm output load.

6.5.6 Minimum load current. The minimum load current is that current required to maintain regulation.

6.5.7 Input voltage range. The range of supply voltage over which the regulator will operate.

6.5.8 Output voltage range. The range of output voltage over which the regulator will operate.

6.5.9 Transient response. The closed-loop step function response of the regulator under small-signal conditions.

6.6 Logistic support. Lead materials and finishes (see 3.3) are interchangeable. Unless otherwise specified, microcircuits acquired for Government logistic support will be acquired to device class B (see 1.2.2), lead material and finish A (see 3.4). Longer length leads and lead forming should not affect the part number.

6.7 Substitutability. The cross-reference information below is presented for the convenience of users. Microcircuits covered by this specification will functionally replace the listed generic-industry type. Generic-industry microcircuit types may not have equivalent operational performance characteristics across military temperature ranges or reliability factors equivalent to MIL-M-38510 device types and may have slight physical variations in relation to case size. The presence of this information should not be deemed as permitting substitution of generic-industry types for MIL-M-38510 types or as a waiver of any of the provisions of MIL-PRF-38535.

Military device type	Generic-industry type
01	79MG
02	79G
03	LM137H
04	LM137K

6.8 Changes from previous issue. Asterisks are not used in this revision to identify changes with respect to the previous issue, due to the extensiveness of the changes.
